

ACAPULCO POOLS GOES GREEN !

Acapulco Pools promotes a wide variety of innovative products and technologies to assist you go green. Explore the potential for heat saving technologies, improve your air quality, reduce your Chlorine usage, eliminate chloramines and protect your swimmers from recreation ‘Water Illnesses’ with the addition of Ultra Violet disinfection. Reduce and reuse discarded water from your pool in your maintenance procedures.

Be environmentally friendly - Be a leader - We will show you how!

BLUE DOT™ ULTRA VIOLET TREATMENT SYSTEM

The **BLUE DOT™ ULTRA VIOLET TREATMENT SYSTEM** is designed to be used in public pools. **BLUE DOT™ ULTRA VIOLET TREATMENT**

SYSTEM, guarantees double disinfection through a significant reduction in the amount of chloramines along with the destruction of bacteria, viruses and other microorganisms present in the water. These lamps operate over a wide spectrum of UV light between 240 to 310 nm (nanometers) in wavelength, producing an effective reduction of chloramines and the ability to eliminate 99% of microorganisms including bacteria and viruses. The **BLUE DOT™ ULTRA VIOLET TREATMENT SYSTEM** will also save on chemical and water usage as it eliminates the unwanted chloramines in the pool.

Model #	Max Flow Rate GPM	Flange Size	# of Lamps
MP060	200	4"	1
MP100	350	4"	1
MP120	610	6"	1
MP140	1320	8"	1
MP240	1980	10"	2
MP340	2975	12"	3
MP440	3960	12"	4

Optional Strainer

In all installations where the **BLUE DOT™ ULTRA VIOLET TREATMENT SYSTEM** is installed after (down stream) the filter, the use of a stainless steel strainer (optional) in the UV reactor outflow end is highly recommended. The strainer assembly is installed between the reactor flange and the piping end flange.

Part #	Model #	Max Flow Rate GPM	Flange Size	# of Lamps

HeatSavr

Heatsavr™ is an effective "liquid pool blanket" that greatly reduces heat loss and evaporation from your exposed pool surface.

Made of simple biodegradable ingredients that form the best barrier currently available to slow the heat and water loss that causes high pool room humidity, and high facility heating bills.

Heatsavr™ slows evaporation substantially. Evaporation is one of the main forms of heat loss from swimming pools and spas. Slowing it can yield large cost savings.

The HS115 is an Automatic Metering System for the application of Heatsavr™, the liquid pool cover. It is a reliable, accurate, inexpensive way to ensure that your pool receives all the energy savings possible from using Heatsavr™.

i - POOL-MISER™

Today's swimming pools and spas, circulation pumps, play features, jet pumps, water slides are significant contributors to a facilities energy costs. Owners are looking for ways to efficiently lower their operating costs. Health departments mandate circulation pumps operate 24 hours per day. Swimming pools and spas have fluctuating operating pressures.

When filters become dirty the pressure increases and flow decreases. Pool and spa systems are not designed to handle the fluctuating pressures effectively. Often much more horsepower is being used than what is required.

Contact Acapulco Pools with your hp + voltage for a quotation.
